## How High Can You Jump?

Flea trainers have observed a predictable & strange habit of fleas while training them. Fleas are trained by putting them in a cardboard box with a top on it. The fleas will jump & hit the top of the cardboard box over & over again.

As you watch them jump & hit the lid something very interesting becomes obvious. The fleas continue to jump, but they're no longer jumping high enough to hit the top. Apparently, Excedrin headache 1738 (a special flea hormone) forces them to limit the height of their jump.

When you take off the lid, the fleas continue to jump, but they will not jump out of the box. Why? The reason is simple: they have conditioned themselves to jump that high, thinking that's all they could do!

***Many times people do the same thing. They restrict themselves & never reach their potential. Just like the fleas, they fail to jump higher, thinking they're doing all they can do!***
